NOTES:

- Source: Hard copy array, AWQ057-0108
- According to the carrier array document, the Medicare allowance amounts are calculated in cells I4-I6 of the original array and cells I46-I48, I87-I89 and I128-I130 of the revised arrays. The allowance amounts for the KO and KP modifiers are the lower of 95% of the median per-unit price of the generic products or 95% of the per-unit price of the lowest brand product. The allowance amount for the KQ modifier is the lower of 95% of the median per-unit price of the generic products or 95% of the per-unit price of the lowest brand product, adjusted by unit dose and compounding factors.

NOTES:

- Source: Hard copy array, AWQ057-0140
- According to the carrier array document, the Medicare allowance amounts are calculated in cells I4-I6 of the original array and cells I46-I48, I87-I89 and I128-I130 of the revised arrays. The allowance amounts for the KO and KP modifiers are the lower of 95% of the median per-unit price of the generic products or 95% of the per-unit price of the lowest brand product. The allowance amount for the KQ modifier is the lower of 95% of the median per-unit price of the generic products or 95% of the per-unit price of the lowest brand product, adjusted by unit dose and compounding factors.

NOTES:

- Source: Hard copy array, AWQ057-0156
- According to the carrier array document, the Medicare allowance amounts are calculated in cells I4-I6 of the original array and cells I46-I48, I87-I89 and I128-I130 of the revised arrays. The allowance amounts for the KO and KP modifiers are the lower of 95% of the median per-unit price of the generic products or 95% of the per-unit price of the lowest brand product. The allowance amount for the KQ modifier is the lower of 95% of the median per-unit price of the generic products or 95% of the per-unit price of the lowest brand product, adjusted by unit dose and compounding factors.

NOTES:

- Source: Hard copy array, AWQ057-1161
- According to the carrier array document, the Medicare allowance amounts are calculated in cells I4-I6 of the original array and cells I46-I48, I87-I89 and I128-I130 of the revised arrays. The allowance amounts for the KO and KP modifiers are the lower of 95% of the median per-unit price of the generic products or 95% of the per-unit price of the lowest brand product. The allowance amount for the KQ modifier is the lower of 95% of the median per-unit price of the generic products or 95% of the per-unit price of the lowest brand product, adjusted by unit dose and compounding factors.

NOTES:

- Source: Hard copy array, AWQ057-1049
- According to the carrier array document, the Medicare allowance amounts are calculated in cells I4-I6 of the original array and cells I46-I48, I87-I89 and I128-I130 of the revised arrays. The allowance amounts for the KO and KP modifiers are the lower of 95% of the median per-unit price of the generic products or 95% of the per-unit price of the lowest brand product. The allowance amount for the KQ modifier is the lower of 95% of the median per-unit price of the generic products or 95% of the per-unit price of the lowest brand product, adjusted by unit dose and compounding factors.

NOTES:

- Source: Hard copy array, AWQ057-1129 - AWQ057-1130
- According to the carrier array document, the Medicare allowance amounts are calculated in cells I4-I6 of the original array and cells I47-I49, I89-I91 and I131-I133 of the revised arrays. The allowance amounts for the KO and KP modifiers are the lower of 95% of the median per-unit price of the generic products or 95% of the per-unit price of the lowest brand product. The allowance amount for the KQ modifier is the lower of 95% of the median per-unit price of the generic products or 95% of the per-unit price of the lowest brand product, adjusted by unit dose and compounding factors.
- In the original array, certain price-per-unit amounts did not appear to calculate correctly; however, the Medicare allowance amounts were determined correctly. The formulas used in the revised arrays result in certain amounts differing from the original array, but the Medicare allowance amounts remain the same.

NOTES:

1. Source: Hard copy array, AWP033-0737 - AWP033-0738
2. The original array did not contain NDC numbers. The NDC numbers were annotated by Myers and Stauffer from the 2001 annual Drug Topics Red Book, pages 202 & 368 (the NDC numbers for the Atrovent/Compumed product were annotated from the 1999 annual Drug Topics Red Book, page 198).
3. According to the carrier array document, the Medicare allowance amounts are calculated in cells K6-K8 of the original array and cells K51-K53, K96-K98, and K141-K143 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the median of the "ARRAY ALL" values. The allowance amount for the KQ modifier is 95% of the median of the "ARRAY ALL" values adjusted by unit dose and compounding factors.
4. The original array did not contain the 95% adjustment of the Medicare allowance. The arrays in this workbook contain the 95% adjustment.
5. The original array contained \$52.80 as the AWP for NDC number 00054-8402-13. The AWP per the 2001 annual Drug Topics Red Book is \$52.87.

NOTES:

- Source: Hard copy array, AWP033-0550 - AWP033-0551
- The original array did not contain NDC numbers. The NDC numbers were annotated by Myers and Stauffer from the 2001 annual Drug Topics Red Book, pages 202 & 368 (the NDC numbers for the Atrovent/Compumed product were annotated from the 1999 annual Drug Topics Red Book, page 198).
- According to the carrier array document, the Medicare allowance amounts are calculated in cells K6-K8 of the original array and cells K51-K53, K96-K98, and K141-K143 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the median of the "ARRAY ALL" values. The allowance amount for the KQ modifier is 95% of the median of the "ARRAY ALL" values adjusted by unit dose and compounding factors.
- The original array did not contain the 95% adjustment of the Medicare allowance. The arrays in this workbook contain the 95% adjustment.
- The original array contained \$52.80 as the AWP for NDC number 00054-8402-13. The AWP per the 2001 annual Drug Topics Red Book is \$52.87.

J7644 K0518.xls

NOTES:

- Source: Hard copy arrays, AWP038-0346 and AWP033-1474
- The original array did not contain NDC numbers. The NDC numbers were annotated by Myers and Stauffer from the 2002 annual Drug Topics Red Book, pages 219 & 389. The NDC number for the Zeinith Goldline product was annotated from the 2001 annual Drug Topics Red Book, page 368 and the NDC number for the Atrovent/Compumed product was annotated from the 1999 annual Drug Topics Red Book, page 198.
- According to the carrier array document, the Medicare allowance amounts are calculated in cells K6-K8 of the original array and cells K51-K53, K96-K98, and K141-K143 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the median of the "ARRAY ALL" values. The allowance amount for the KQ modifier is 95% of the median of the "ARRAY ALL" values adjusted by unit dose and compounding factors.
- The original array contained \$52.80 as the AWP for NDC number 00054-8402-13. The AWP per the 2002 annual Drug Topics Red Book is \$52.87.

J7644 K0518.xls

NOTES:

- Source: Hard copy arrays, AWP033-1352 and AWP038-0704
- According to the carrier array document, the Medicare allowance amounts are calculated in cells K6-K8 of the original array and cells K56-K58, K103-K105, and K150-K152 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the median of the "ARRAY ALL" values. The allowance amount for the KQ modifier is 95% of the median of the "ARRAY ALL" values adjusted by unit dose and compounding factors.
- The original array contained several keying errors of NDC numbers. The revised arrays contain corrected NDC numbers.
- The original array contained duplicate entries of the 3 Dey products. The duplicate entries of the Dey products have been removed from the revised arrays.

Oct 02

J7644 K0518.xls

NOTES:

- Source: Hard copy arrays, AWP033-1243 and AWP038-1461
- According to the carrier array document, the Medicare allowance amounts are calculated in cells K6-K8 of the original array and cells K56-K58, K103-K105, and K150-K152 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the median of the "ARRAY ALL" values. The allowance amount for the KQ modifier is 95% of the median of the "ARRAY ALL" values adjusted by unit dose and compounding factors.
- The original array contained several keying errors of NDC numbers. The revised arrays contain corrected NDC numbers.
- The original array contained duplicate entries of the 3 Dey products. The duplicate entries of the Dey products have been removed from the revised arrays.

J7644 K0518.xls

NOTES:

1. Source: Hard copy array, AWP033-1810
2. According to the carrier array document, the Medicare allowance amounts are calculated in cells K6-K8 of the original array and cells K56-K58, K103-K105, and K150-K152 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the median of the "ARRAY ALL" values. The allowance amount for the KQ modifier is 95% of the median of the "ARRAY ALL" values adjusted by unit dose and compounding factors.
3. The original array contained several keying errors of NDC numbers. The revised arrays contain corrected NDC numbers.
4. The original array contained duplicate entries of the 3 Dey products. The duplicate entries of the Dey products have been removed from the revised arrays.

NOTES:

- Source: Hard copy array, AWP033-1653 - AWP033-1654
- According to the carrier array document, the Medicare allowance amounts are calculated in cells K6-K8 of the original array and cells K56-K58, K103-K105, and K150-K152 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the median of the "ARRAY ALL" values. The allowance amount for the KQ modifier is 95% of the median of the "ARRAY ALL" values adjusted by unit dose and compounding factors.
- The original array contained several keying errors of NDC numbers. The revised arrays contain corrected NDC numbers.
- The original array contained duplicate entries of the 3 Dey products. The duplicate entries of the Dey products have been removed from the revised arrays.

J7644 K0518.xls

NOTES:

- Source: Hard copy array, AWP033-2124
- According to the carrier array document, the Medicare allowance amounts are calculated in cells K6-K8 of the original array and cells K56-K58, K103-K105, and K150-K152 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the median of the "ARRAY ALL" values. The allowance amount for the KQ modifier is 95% of the median of the "ARRAY ALL" values adjusted by unit dose and compounding factors.
- The original array contained several keying errors of NDC numbers. The revised arrays contain corrected NDC numbers.
- The original array contained duplicate entries of the 3 Dey products. The duplicate entries of the Dey products have been removed from the revised arrays.

NOTES:

- Source: Hard copy array, AWP033-1988
- According to the carrier array document, the Medicare allowance amounts are calculated in cells K6-K8 of the original array and cells K53-K55, K100-K102, and K147-K149 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the median of the "ARRAY ALL" values. The allowance amount for the KQ modifier is 95% of the median of the "ARRAY ALL" values adjusted by unit dose and compounding factors.

Palmetto Arrays (2001Q4-2003Q4)

NOTES:

1. Source: Hard copy array, AWQ037-0050 through AWQ037-0052
2. The original array did not contain formulas and calculations for determining the median and Medicare allowable amounts. The calculations of the median and the KO/KP and KQ modifier allowable amounts are based on calculations used in previous Palmetto arrays.
3. The Medicare allowance amounts are calculated in cells L24 - L25 of the original array and cells L58 - L59, L91 - L92, and L124 - L125 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the the median of the "Unit Price" values. The allowance amount for the KQ modifier is 95% of the median of the "Unit Price" values adjusted by unit dose and compounding factors.

NOTES:

1. Source: Hard copy array, AWQ037-0059 through AWQ037-0062
2. The original array did not contain formulas and calculations for determining the median and Medicare allowable amounts. The calculations of the median and the KO/KP and KQ modifier allowable amounts are based on calculations used in previous Palmetto arrays.
3. The Medicare allowance amounts are calculated in cells L24 - L25 of the original array and cells L58 - L59, L91 - L92, and L124 - L125 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the the median of the "Unit Price" values. The allowance amount for the KQ modifier is 95% of the median of the "Unit Price" values adjusted by unit dose and compounding factors.

NOTES:

1. Source: Hard copy array, AWQ037-0064 through AWQ037-0067
2. The original array did not contain formulas and calculations for determining the median and Medicare allowable amounts. The calculations of the median and the KO/KP and KQ modifier allowable amounts are based on calculations used in previous Palmetto arrays.
3. The Medicare allowance amounts are calculated in cells L24 - L25 of the original array and cells L58 - L59, L91 - L92, and L124 - L125 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the the median of the "Unit Price" values. The allowance amount for the KQ modifier is 95% of the median of the "Unit Price" values adjusted by unit dose and compounding factors.

NOTES:

- Source: Hard copy array, AWQ037-0069 through AWQ037-0072
- The original array did not contain formulas and calculations for determining the median and Medicare allowable amounts. The calculations of the median and the KO/KP and KQ modifier allowable amounts are based on calculations used in previous Palmetto arrays.
- The Medicare allowance amounts are calculated in cells L24 - L25 of the original array and cells L58 - L59, L91 - L92, and L124 - L125 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the median of the "Unit Price" values. The allowance amount for the KQ modifier is 95% of the median of the "Unit Price" values adjusted by unit dose and compounding factors.

NOTES:

- Source: Hard copy array, AWQ037-0074 through AWQ037-0076
- The original array did not contain formulas and calculations for determining the median and Medicare allowable amounts. The calculations of the median and the KO/KP and KQ modifier allowable amounts are based on calculations used in previous Palmetto arrays.
- The Medicare allowance amounts are calculated in cells J34 - J35 of the original array and cells J72 - J73, J109 - J110, and J146 - J147 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the median of the "price" values. The allowance amount for the KQ modifier is 95% of the median of the "price" values adjusted by unit dose and compounding factors.

NOTES:

1. Source: Hard copy arrays, AWQ037-0078 through AWQ037-0080
2. Certain NDC numbers were keyed incorrectly on the original array file. On the revised arrays, the correct NDC numbers for the Dey and Roxane products were annotated by Myers and Stauffer from the 2003 annual Drug Topics Red Book, pages 219 and 384.
3. The original array did not contain formulas and calculations for determining the median and Medicare allowable amounts. The calculations of the median and the KO/KP and KQ modifier allowable amounts are based on calculations used in previous Palmetto arrays.

ORIGINAL ARRAY (Per Carrier Array Documents)

NOTES:

- Source: Electronic array, AWQ020 CD#1\J7644.xls, Tab: 2001 - 4th qtr
- According to the carrier array document, the Medicare allowance amounts are calculated in cells C31 and C41 of the original array and cells C75, C85, C119, C129, C163, and C173 of the revised arrays. The allowance amounts for the KO and KP modifiers are 95% of the lower of the median of the generic product "COST/UNIT DOSAGE" values or the lowest brand product "COST/UNIT DOSAGE" value. The allowance amount for the KQ modifier is 95% of the lower of the median of the generic product "COST/UNIT DOSAGE" values or the lowest brand product "COST/UNIT DOSAGE" value adjusted by unit dose and compounding factors.
